

Columns and bars

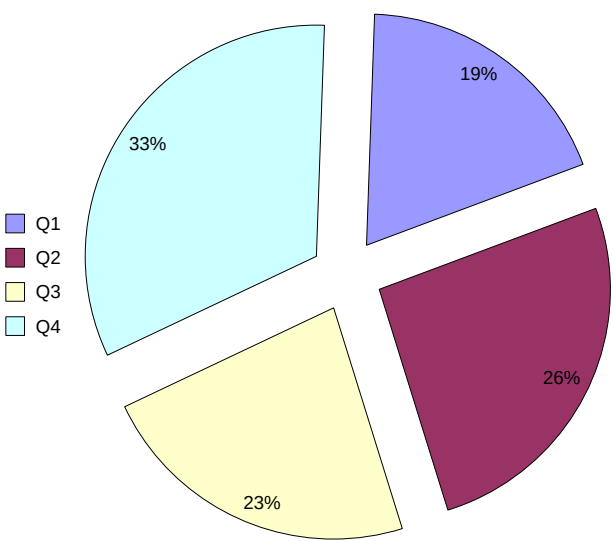

Lines, areas and combinations

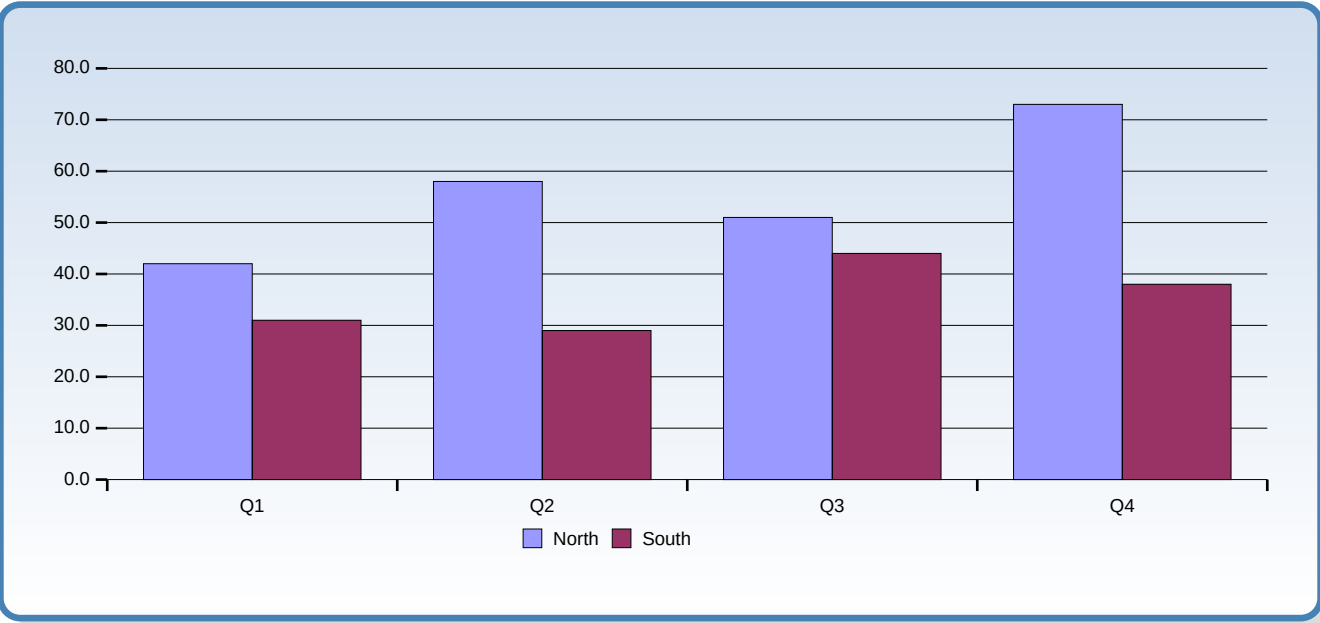

Pies, labels and frames

Pie2D - legend docked Right

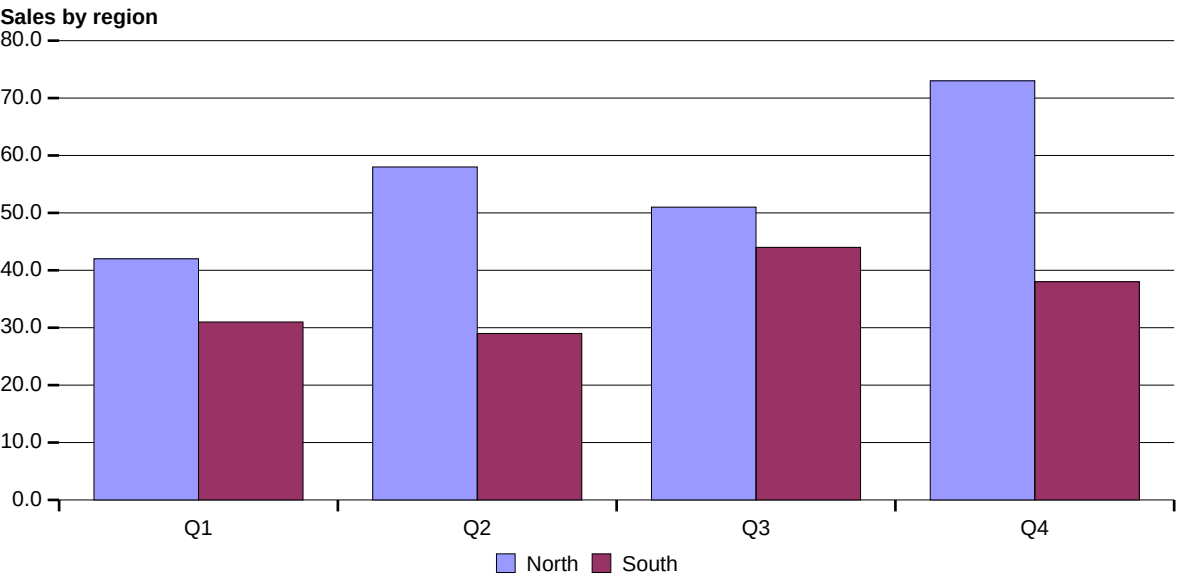

PieExploded2D - legend docked Left

ChartFrame.Draw - the frame is the frame's, not the chart's

The same figures through PinataLayout

A chart added to a section is an element of the document like a paragraph or a table. It is laid out in the flow, it moves when the text above it moves, and it breaks to the next page if it does not fit - none of which the drawn route does for you.

The two routes reach the same renderers. Reach for this one when the chart belongs to a document, and for the drawn one when it belongs to a page you are laying out yourself.
