What the settings are

body

What this document asks a reader for

None of the settings below changes a pixel of any page. They are the document telling a reader how it would like to be presented, and a reader is free to ignore every one of them.

PageLabels	i-iii then 1-3	The page box reads iv on sheet four, not 4
PageLayout	TwoColumnRight	Two pages side by side, odd ones on the right
PageMode	UseOutlines	The bookmark panel is open when the file opens
CenterWindow	true	The window opens in the middle of the screen
FitWindow	true	The window is sized to the first page
DisplayDocTitle	true	The title bar shows Info.Title, not the file name
Language	en-GB	What a screen reader announces it in
CustomValues["/Pipeline"]	34 bytes of JSON	Private data; no reader shows it
NamedDestinations	4 names	Links that survive pages being inserted

The six label styles

Decimal	1 2 3 4
LowercaseRoman	i ii iii iv
UppercaseRoman	I II III IV
LowercaseLetters	a b c d
UppercaseLetters	A B C D
None	prefix "Appendix " Appendix Appendix Appendix Appendix

PdfPageLabelStyle.None with a prefix is how a run is labelled without being numbered at all - every sheet of it reads the prefix and nothing else, which is what a run of unnumbered plates wants.

After a save and a reopen

Language = "en-GB", first page label = "i", CustomValues["/Pipeline"] = "kept"
